Hydroquinone is a highly effective treatment of moderate to severe hyperpigmentation, especially melasma. After this treatment period, patients can maintain their results with the ZO® Non-Hydroquinone Brightening System.

NON-HYDROQUINONE

For patients who want an effective hyperpigmentation treatment without hydroquinone, the ZO® Non-Hydroquinone Brightening Portfolio is the optimal choice. These brightening treatments rapidly brighten and even skin tone, minimize redness, improve skin color and reverse the signs of aging.

RETINOL SKIN BRIGHTENER

This effective retinol blend reduces the appearance of uneven skin tone and age spots, and provides antioxidant protection for a brighter skin tone.
